The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

WPI; 2001-318749/34.

                                                                                                                                                         New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                  Tang YT, Asundi V, Goodrich RW, Ren F, Zhang J, Zhao QA Ghosh M, Xue AJ, Wehrman T, Weng G, Zhou P, Drmanac RT, Ma Y, Wang D, Chen R, Xu C, Boyle BJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polynuclectide which comprises a 3'-end sequence, where the oligonuclectide comprises at least 15 nuclectides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynuclectides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13228 and AAH13633 to AAH18742 represent human cDNA sequences; AB954846 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent human cDNAs essent considers, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                          N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (HYSE-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel protein (useful for identifying genetic disorders) #167

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0,
```

The invention proteins. The

comprises the amino acid and DNA and protein sequences of

sequences

coding sequences of novel the invention are useful

Sequence 515

Claim 20;

SEQ ID NO 1078; 1177pp; English.

밁 Ş

                                                                                  The sequence is that of a protein which can be used in the preparation of the recombinant breast cancer antigen, BRCAI, binding proteins BARDI, B123, BE2, BE14, BE31 or BE445, or a composition for the detection of a BARDI, B123, BE2, BE14, BE31 or BE445 nucleic acid sequence, specifically a wild type BARDI composition for the detection or purification of BRCAI, useful to identify a patient having, or at risk of developing cancer. BARDI can be used in the preparation of an anti-BARDI antibody, and in the detection and purification of a BRCAI protein. BARDI, B123, BE2, BE14, BE31 or BE445 can used in the identification of a binding protein agonist or antagonist that alters the binding of BARDI, B123, BE2, BE14, BE31 or BE445 complex. The antibodies can be used to detect BARDI, B123, BE2, BE14, BE31 or BE445, a specific anti-BARDI antibody can be used to identify a patient having or at risk of developing cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA sequence encoding BARD1, B123, BE2, BE14, BE31 or BE445 - which as breast cancer antigen, BRCA1, binding proteins are useful to identify patient having or at risk of developing cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 1998-230317/20.

                                                                                                                                                          The invention is directed to BAP28 polypeptides, BAP28 polynucleotide sequences and regulatory region located at the 3' and 5' ends of the BAP28 coding region. The BAP28 polypeptides can be expressed by standard recombinant methodology. BAP28 polynucleotides and polypeptides have been found to be over expressed in prostate tumour cells, therefore levels of BAP28 expression and/or activity may be assayed (e.g. by polymerase chain reaction (PCR)) to diagnose patient suffering from or susceptible to prostate cancer. Antibodies specific for the BAP28 polypeptides are useful as diagnostic reagents. Biallelic markers of the BAP28 gene are useful in genetic analysis. The present sequence represents a protein encoded by a first cDNA sequence of the BAP28 gene consisting of the exons 1 to 45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New BAP28 polynucleotides and polypeptides overexpressed in prostate cancer cells for diagnosing prostate tumors, e.g. by hybridization oppolymerase chain reaction assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             25-JUN-1999; 99US-0141323P.

                                                                                                                                                                                                                                                                     Sequence 220 AA;
                                                                                                                                                                                                                                                                                        of a microbe, using the gyrase gene as the index. The method involves the use of PCR primers to amplify DNA from the microbe, which is then identified or detected depending on its base sequence. The method can be used to classify and identify an unidentified microbe strain rapidly and with high precision. The present sequence represents a gyrase protein. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY23793;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC zymosterol, Chalesta-7,24-dienol and cholesta-5,7,24-trianol
CC zymosterol, Cholesta-7,24-dienol and cholesta-5,7,24-trianol
CC structural gene encoding a polypeptide having HMG-CoA reductase activity
CC in a mutant yeast having defects in the expression of zymosterol-24-
CC (methyl transferase and ergosta-5, 7, 24 (28) -trienol-22-dehydrogenase;
CC (B) a method of increasing squalene, ergosta-8, 22-dienol, ergosta-7, 22-
CC dienol, ergosta-8-enol and ergosta-7-enol accumulation in S. cerevisiae
CC comprising transforming a mutant S.cerevisiae having a defect in the
CC comprising a vector operatively linked to an exogenous DNA segment that
CC comprising a vector operatively linked to an exogenous DNA segment that
CC encodes the catalytic region and at least a portion of the linker region
CC to the free from the membrane binding region of an HMG-CoA reductase
CC enzyme and a promoter suitable for driving the expression of the
CC reductase in the yeast; (C) a method of increasing squalene, zymosterol
CC zymosterol, a promoter transferase and episterol-5-dehydrogenase with a
CC zymosterol, aregosta-5, 7, 24(28)-trienol and ergosta-5, 7-dienol
CC zymosterol, ergosta-5, 7, 24(28)-trienol and ergosta-5, 7-dienol
CC zymosterol, ergosta-5, 7, 24(28)-trienol and ergosta-5, 7-dienol
CC zymosterol, ergosta-5, 7, 24(28)-trienol and ergosta-5, 7-dienol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                    New unicellular organisms comprising exogenous nucleic acids encoding a geranylgeranyl pyrophosphate and a diterpene synthase, useful for producing diterpenes and diterpene precursors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Geranylgeranyl pyrophosphate synthase; diterpene; diterpene precursor; diterpene synthase; defence toxin; volatile defensive signal; pollinator attractant; photoprotectant; HMG-CoA reductase; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAQ70611 codes for a yeast HMG-CoA reductase 2, AAR58611. Using the A. tumefaciens vector pKYLX71, AAQ70611 was used to produce transgenic plants with increased HMG-CoA reductase activity. Plants with increased HMG-CoA reductase activity were found to have greater squalene and sterol accumulation, and therefore increased insect resistance. (Updated on 25-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Transgenic plants with increased insect resistance - by with DNA encoding HMG-COA activity to increase squalene

Matsuda SPT, Hart EA;

WPI; 2004-373921/35.

New unicellular organisms comprising exogenous nucleic acids encoding a geranylgeranyl pyrophosphate and a diterpene synthase, useful for producing diterpenes and diterpene precursors.

Disclosure; SEQ ID NO 218; 38pp; English.

The invention relates to a unicellular organism for producing a diterpene or diterpene precursor comprising an exogenous nucleic acid sequence

The invention relates to a unicellular organism for producing a diterpene or diterpene precursor comprising an exogenous nucleic acid sequence

Disclosure; SEQ ID NO 199; 38pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the organism. The invention also relates to methods of producing a cc diterpene or diterpene precursor and amethod of isolating a diterpene comprising growing several cells in the presence of a cc golyaromatic resin to make a cell/resin mixture, where at least one of the cells further comprises at least one isolated and purified nucleic card sequence of a yeast expression library, and the expression of the cc nucleic acid sequence is regulated by an inducible promoter under conditions where the expression is induced, filtering the cell/resin mixture, extracting the cell/resin mixture with alcohol to produce an cc organic eluent and analysing the organic eluent by a screening method cc including chromatography and/or spectroscopy, to identify the nucleic acid sequence encoding the diterpene synthase. The unicellular cc microorganism is useful as a diterpene or diterpene precursor producing system. Diterpenes, in plants, serve as defence toxins, volatile cc defensive signals, pollinator attractants and photoprotectants. This cc sequence represents an HMG-OA reductase polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from the printed specification but was obtained in electronic format from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The invention also relates to methods of producing a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Geranylgeranyl pyrophosphate synthase; diterpene; diterpene precursor; diterpene synthase; defence toxin; volatile defensive signal; pollinator attractant; photoprotectant; HMG-CoA reductase; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1045 AA
New unicellular organisms comprising exogenous nucleic acids encoding geranylgeranyl pyrophosphate and a diterpene synthase, useful for producing diterpenes and diterpene precursors.
                                                                                                                                           WPI; 2004-373921/35
                                                                                                                                                                                                                 Matsuda
                                                                                                                                                                                                                                                                                                                                                                                              05-JAN-2001; 2001US-0259880P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    07-JAN-2002; 2002US-00041018
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      15-APR-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cc the organism. The invention also relates to methods of producing a cliterpene or diterpene precursor and a method of isolating a diterpene comprising growing several cells in the presence of a golyaromatic resin to make a cell/resin mixture, where at least one of the cells further comprises at least one isolated and purified nucleic conditions where the expression library, and the expression of the nucleic acid sequence is regulated by an inducible promoter under conditions where the expression is induced, filtering the cell/resin mixture with alcohol to produce an organic eluent and analysing the organic eluent by a screening method corganic eluent and analysing the organic eluent by a screening method conditions is useful as a diterpene synthase. The unicellular caid sequence encoding the diterpene synthase. The unicellular corganism is useful as a diterpene or diterpene precursor producing system. Diterpenes, in plants, serve as defence toxins, volatile cystem. Diterpenes, in plants, serve as defence toxins, volatile sequence espresents an HMG-COA reductase polypeptide used in the scope of the printed specification but was obtained in electronic format from CC USPTO at sequence data for this patent did not form part content on the sequence data for this patent did not form part contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           encoding a geranylgeranyl pyrophosphate synthase under the control of a promoter operable in the organism, and an exogenous nucleic acid sequence encoding a diterpene synthase under the control of a promoter operable in the organism. The invention also relates to methods of producing a
                                                                                                                                                          New unicellular organisms comprising exogenous nucleic acids encoding geranylgeranyl pyrophosphate and a diterpene synthase, useful for producing diterpenes and diterpene precursors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Geranylgeranyl pyrophosphate synthase; diterpene; diterpene precursor; diterpene synthase; defence toxin; volatile defensive signal;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-JUL-2004

CC encoding a geranylgeranyl pyrophosphate synthase under the control of a C promoter operable in the organism, and an exogenous nucleic acid sequence cencoding a diterpene synthase under the control of a promoter operable in CC the organism. The invention also relates to methods of producing a CC diterpene or diterpene precursor and a method of isolating a diterpene comprising growing several cells in the presence of a cC golyaromatic resin to make a cell/resin mixture, where at least one of CC the cells further comprises at least one isolated and purified nucleic acid sequence of a yeast expression library, and the expression of the cull-resin expression is inducible promoter under comprise at the expression is inducible promoter under conditions where the expression is induced, filtering the cell/resin corganic eluent and analysing the organic eluent by a screening method corganic eluent and analysing the organic eluent by a screening method corganic eluent and analysing the organic eluent by a screening method corganic eluent and analysing the organic eluent by a screening method corganic eluent and setting the organic eluent by a screening method corganic eluent and salidate eluent by a screening method corganic eluent and salidate eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent eluent elle ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ellente ell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
```

밁 S

The invention relates to a unicellular organism for producing a diterpene or diterpene precursor comprising an exogenous nucleic acid sequence

Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.

Claim 27; SEQ ID NO 26531; 487pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC diterpene or diterpene precursor and a methods of producing a diterpene or diterpene precursor and a methods of solating a diterpene comprising growing several cells in the presence of a synthase comprising growing several cells in the presence of a collyresin to make a cell/resin mixture, where at least one of the cells further comprises at least one isolated and purified nucleic acid sequence of a yeast expression library, and the expression of the nucleic acid sequence is regulated by an inducible promoter under conditions where the expression is induced, filtering the cell/resin conditions where the expression is induced, filtering the cell/resin corganic eluent and analysing the organic eluent by a screening method conditions celluding chromatography and/or spectroscopy, to identify the nucleic acid sequence encoding the diterpene or diterpene precursor producing system. Diterpenes, in plants, serve as defence toxins, volatile condensive signals, pollinator attractants and photoprotectants. This sequence represents an HMG-CoA reductase polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part contents. The printed specification but was obtained in electronic format from the scope of the printed specification but was obtained in electronic format from the scope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Best Local

                                      The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to human single exon nucleic acid probes (SENPs see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

Sequence 31479, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136

FULE RETERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1998-02-18

PRIOR APPLICATION NUMBER: US 60/094,190
